

Hands-On Diode Laser Training for the Dental Hygienist

The Diode Laser has become the most utilized laser in Dental Hygiene practice today. This course will cover both a didactic and hands-on training to empower the hygienist to implement diode lasers into their everyday workflow while improving the standard of care for their patients

8 CE UNITS

LEARNING OBJECTIVES:

- ✦ Learn the fundamentals of diode laser proficiency such as history, physics, delivery systems, safety and regulatory compliance
- ✦ Establish the benefits that diode lasers provide for patients, the provider, and the practice
- ✦ Review best practices in communication, coding and treatment planning
- ✦ Experience didactic and hands-on laser instruction for various hygiene applications and settings including sulcular debridement, disinfection, aphthous ulcers, herpetic lesions, hemostasis, whitening, pain therapy, and desensitization.
- ✦ Discover how integrate diode lasers into your everyday workflow while increasing profitability for your hygiene department
